Summary

I've been doing Software Development for a while now. I am a full stack developer and have spent most of my recent years working in: *Backbone.js, ReactJS, Spring, Hibernate, Oracle, Struts, CSS, ILOG JRules, Web Services, WebLogic, Mule ESB, JUnit, Ant, Maven, Eclipse.*

- Check out my [recommendations on LinkedIn](#).

Clients

I've several representations of my profile to help quickly & visually explain what I've done. Take a look at them for specifics ([Trello](#), [Infographic](#), [Mindmap](#)) but I've included a concise list below, *in the interest of brevity*, for your convenience.

Most recent ones

- [Snowpal](#): Product Owner working on several different products. Part time developer as well. (*Started: 2016*).
- [ManTech](#): Worked on the design, development, testing and deployment of JEE Applications. (Java/Spring/Hibernate/JavaScript/Oracle; Started 04/2018).
- [Leidos](#): Worked on the design, development, testing and deployment of JEE Applications. (Java/Spring/Hibernate/JavaScript/Oracle; *Ended: 04/2018*).
- [Hewlett Packard](#): Developed numerous Web modules that ranged from being complete UI components to server side libraries that had little, if any, UI interaction. A full stack developer, essentially (Java/Spring/Hibernate/Oracle/ILOG JRules; Ended 11/2016).
- [N.E.W](#): Worked on the design, development, testing and deployment of JEE Applications. (Java/JSF/Oracle; *Ended: 12/2008*).

Over the years

- [Agent Arts](#): Worked on development of Java Applications (Java/Oracle; *Ended: 09/2007*).
- [Verizon](#): Worked on development of PHP Applications (PHP, Oracle; Ended: 01/2007).

Roles

Here's a quick look at some of the roles I've played, can play & enjoy doing so!

Software Developer

I have been working on developing web applications for almost a decade and a half, and have worked with organizations of varying sizes (ranging from 5 to 10K+). This has given me a perspective into a varied set of stacks, and a plethora of approaches to solving engineering problems.

Product Owner/Manager

I enjoy product management, and therefore have been actively involved in defining requirements and scopes for numerous products over the years.

Technical Lead

I have been a Technical Lead in a number of projects, and have led engineering teams in the capacity of a Senior Developer. I understand working with not just engineers but other stakeholders as well.

Everything else that relates to getting work done

While development forms the foundation of what I do, it is needless to mention that you need a number of other related skills to get the job done (deployment to testing to support). I am well versed with almost anything that development entails.
